

## Step 1: Rinse Off Dirt

For daily use, rinse off the dirt from your gardening tools using high-pressure setting on your hose.

Use a bristle to scrub away stubborn dirt, if necessary.

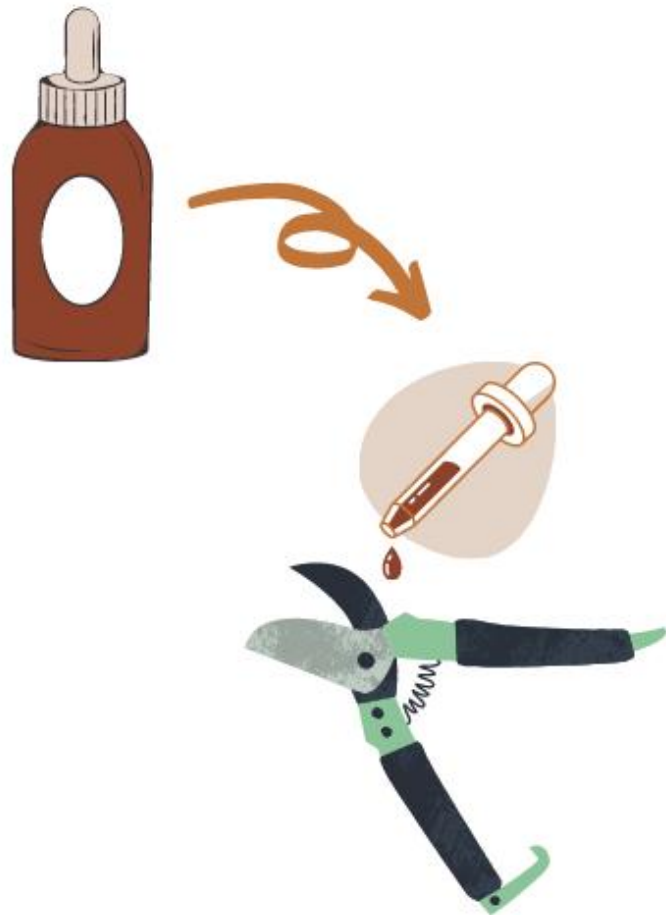

## Step 2: Dry

Pat the tools dry with a piece of cloth.

Let the tools dry completely.

## Step 3: Coat with Oil

Apply a thin coat of plant-based oil on the metal surface of the tools.

This will protect the tools from rust and corrosion.

## Step 4: Store

Store your tools in a dry, well-ventilated shed or garage.

Hang your tools or store them upside down to protect the blades.

Alternatively, small tools can be put into a bucket filled with sand.
